

EveryPoint®

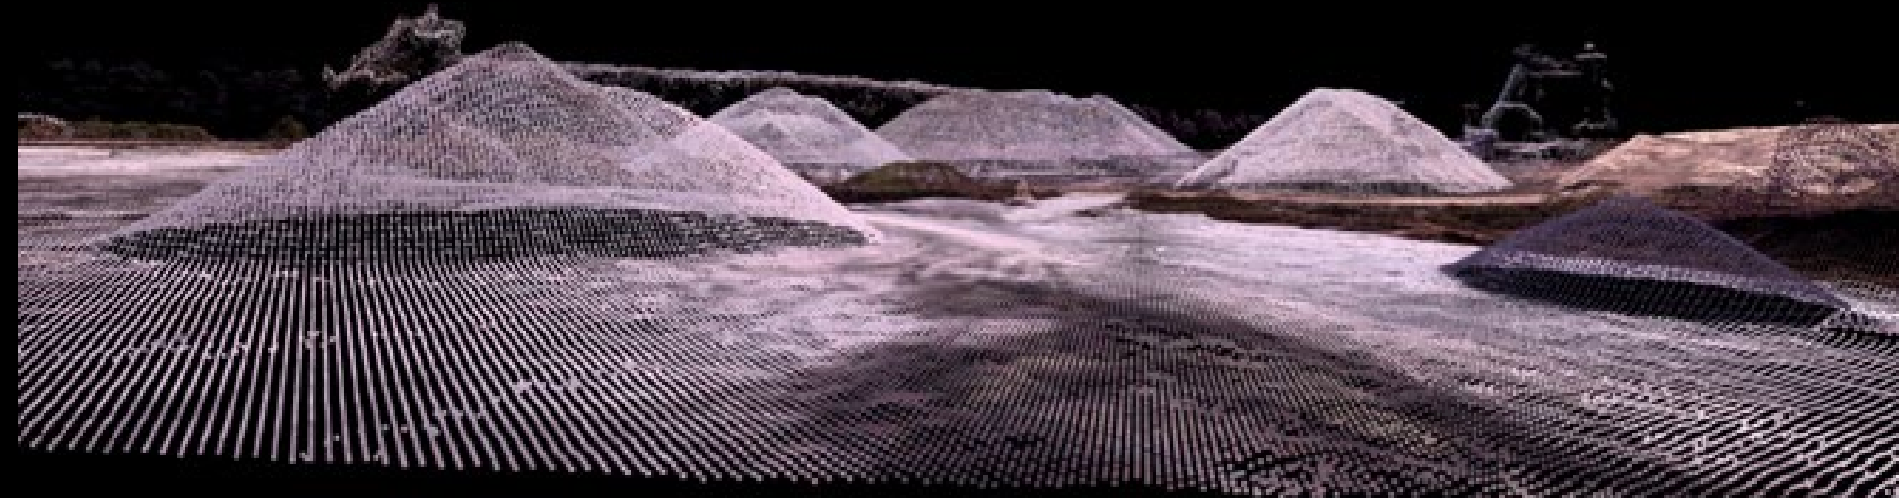

Innovation using imagery

- Vision
- Evolution of computing
- Business case for digitization
- Digitized stockpile management
- iOS examples:
 - Stockpiles
 - Forensics
 - Telecom infrastructure
- Rail cars: leakage, volume and condition
- Pallets
- NeRFs

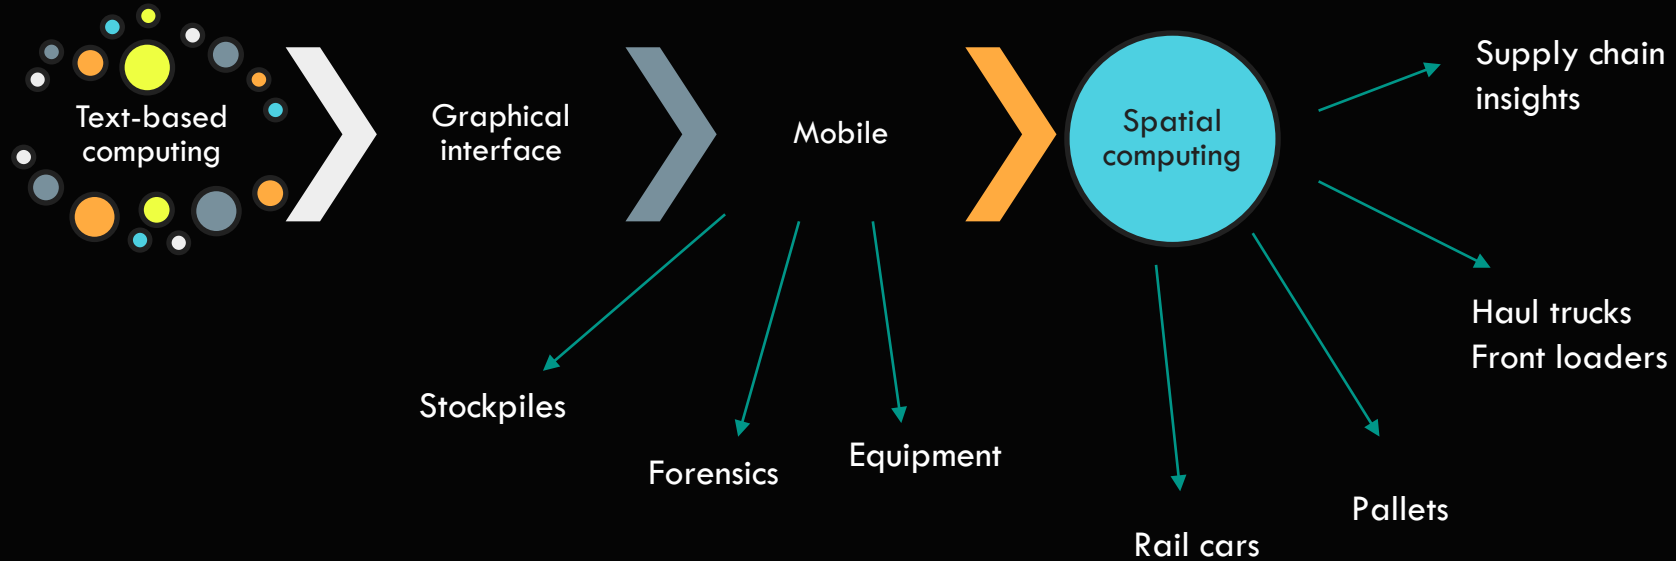

EveryPoint Vision

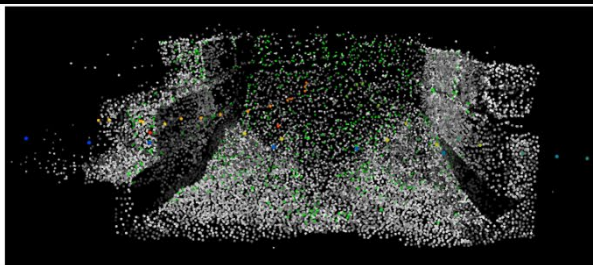

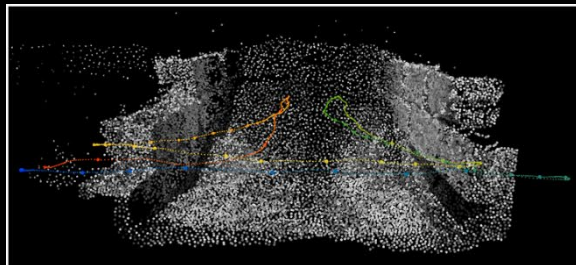

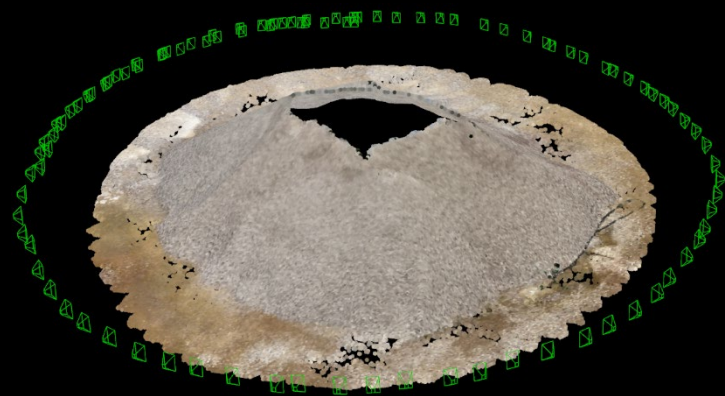

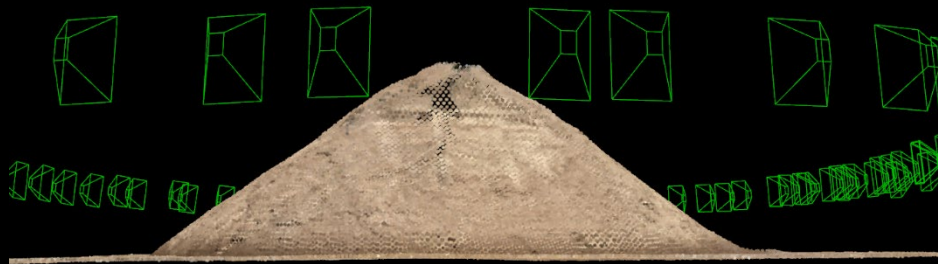

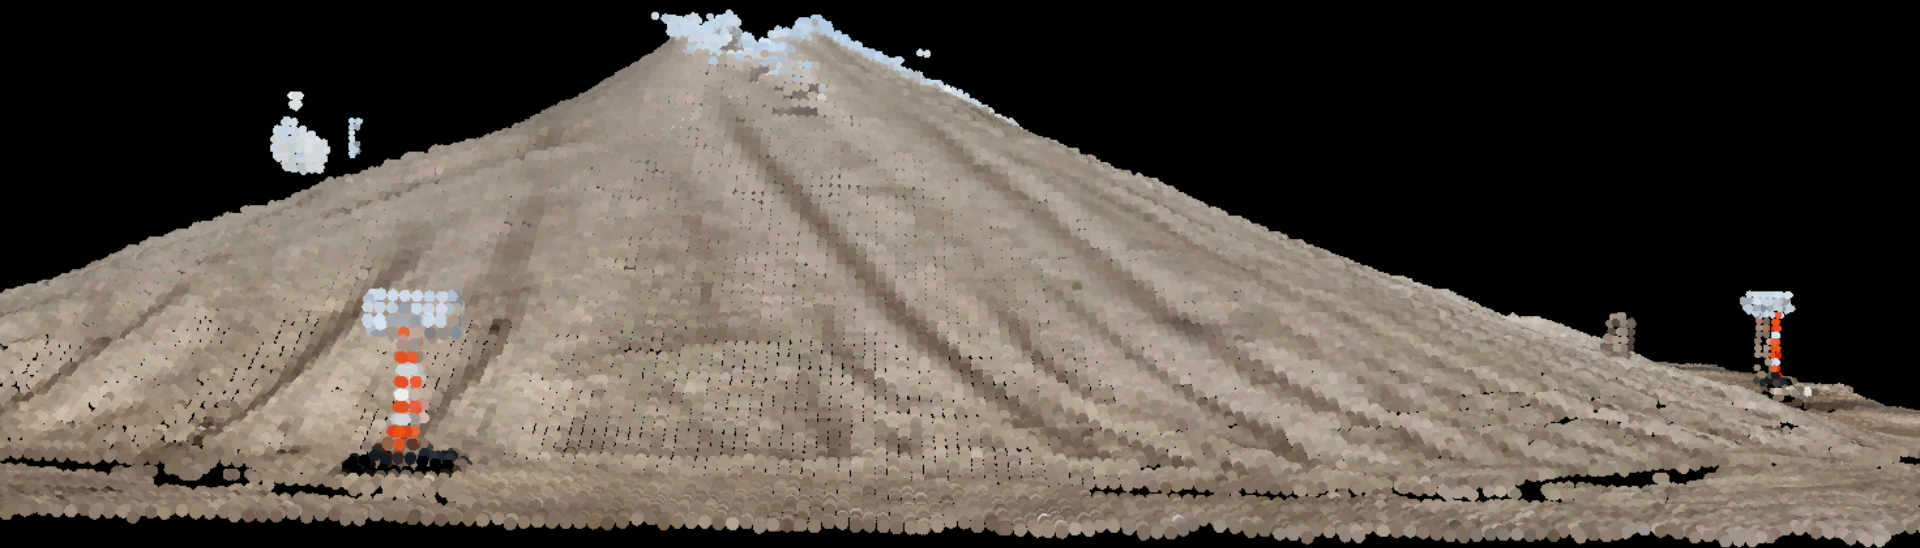

Every point on the planet will be digitized every second of every day

The evolution of computing: Image processing becomes digitization

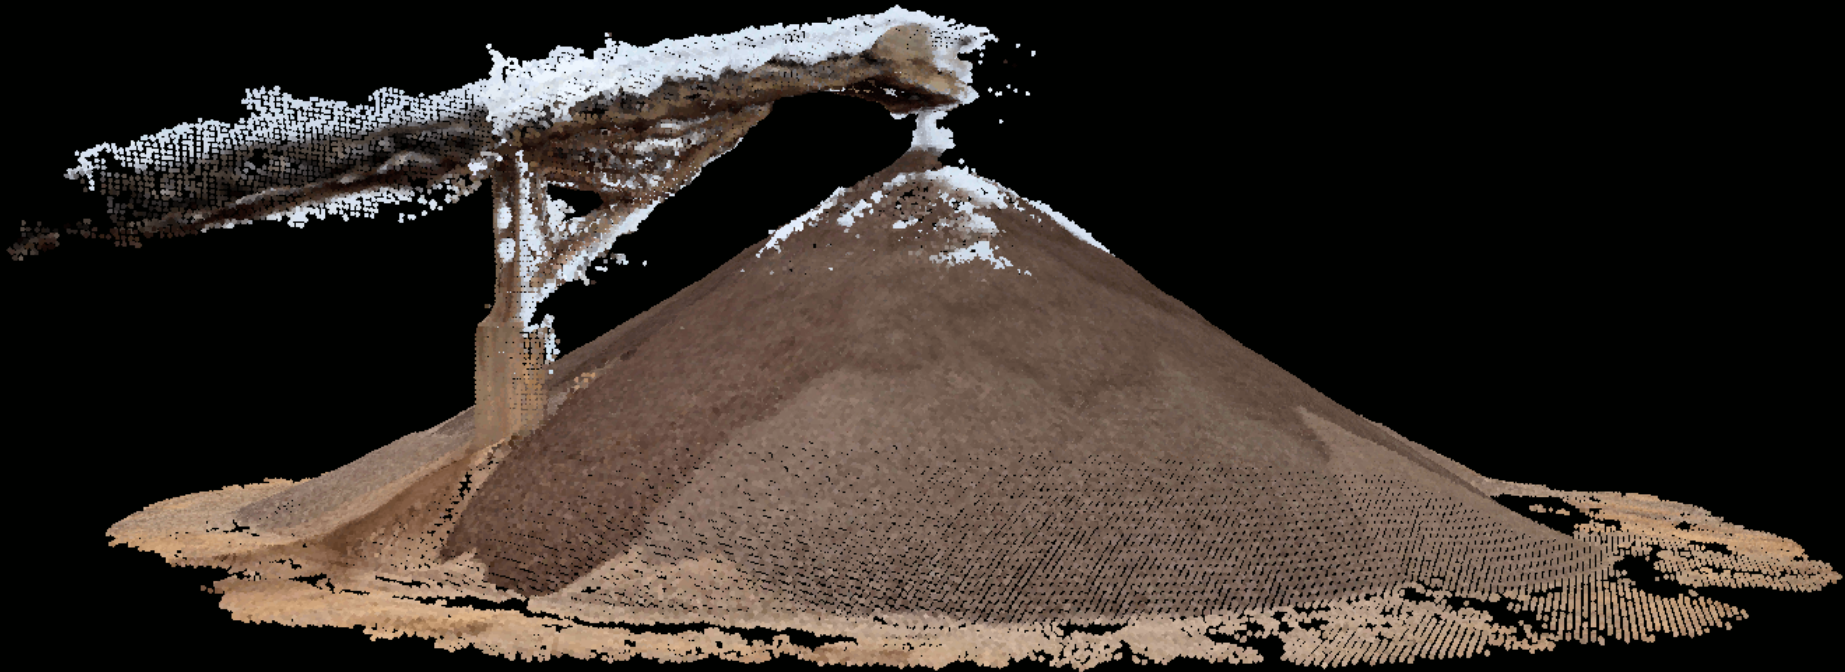

Digitized stockpile management: Using images to measure piles

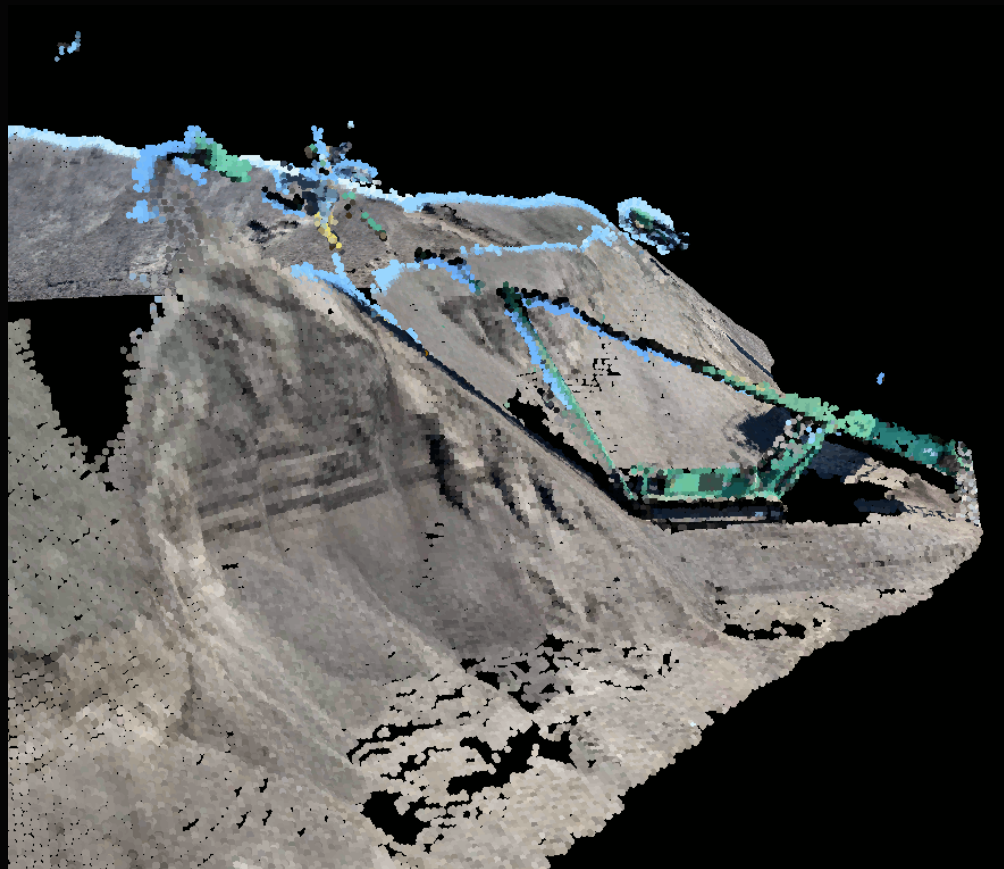

Improvements in point cloud filters and 3D reconstruction remove obstructions
Example: Cones removed

Improvements in point cloud filters and 3D reconstruction remove obstructions
Example: Side stacker removed

Example: Bunker walls removed

Example: Pile measured with snow

Example: Site and pile view

1,219 Tonnage

Continuous measurement of sites and life cycle of vital assets

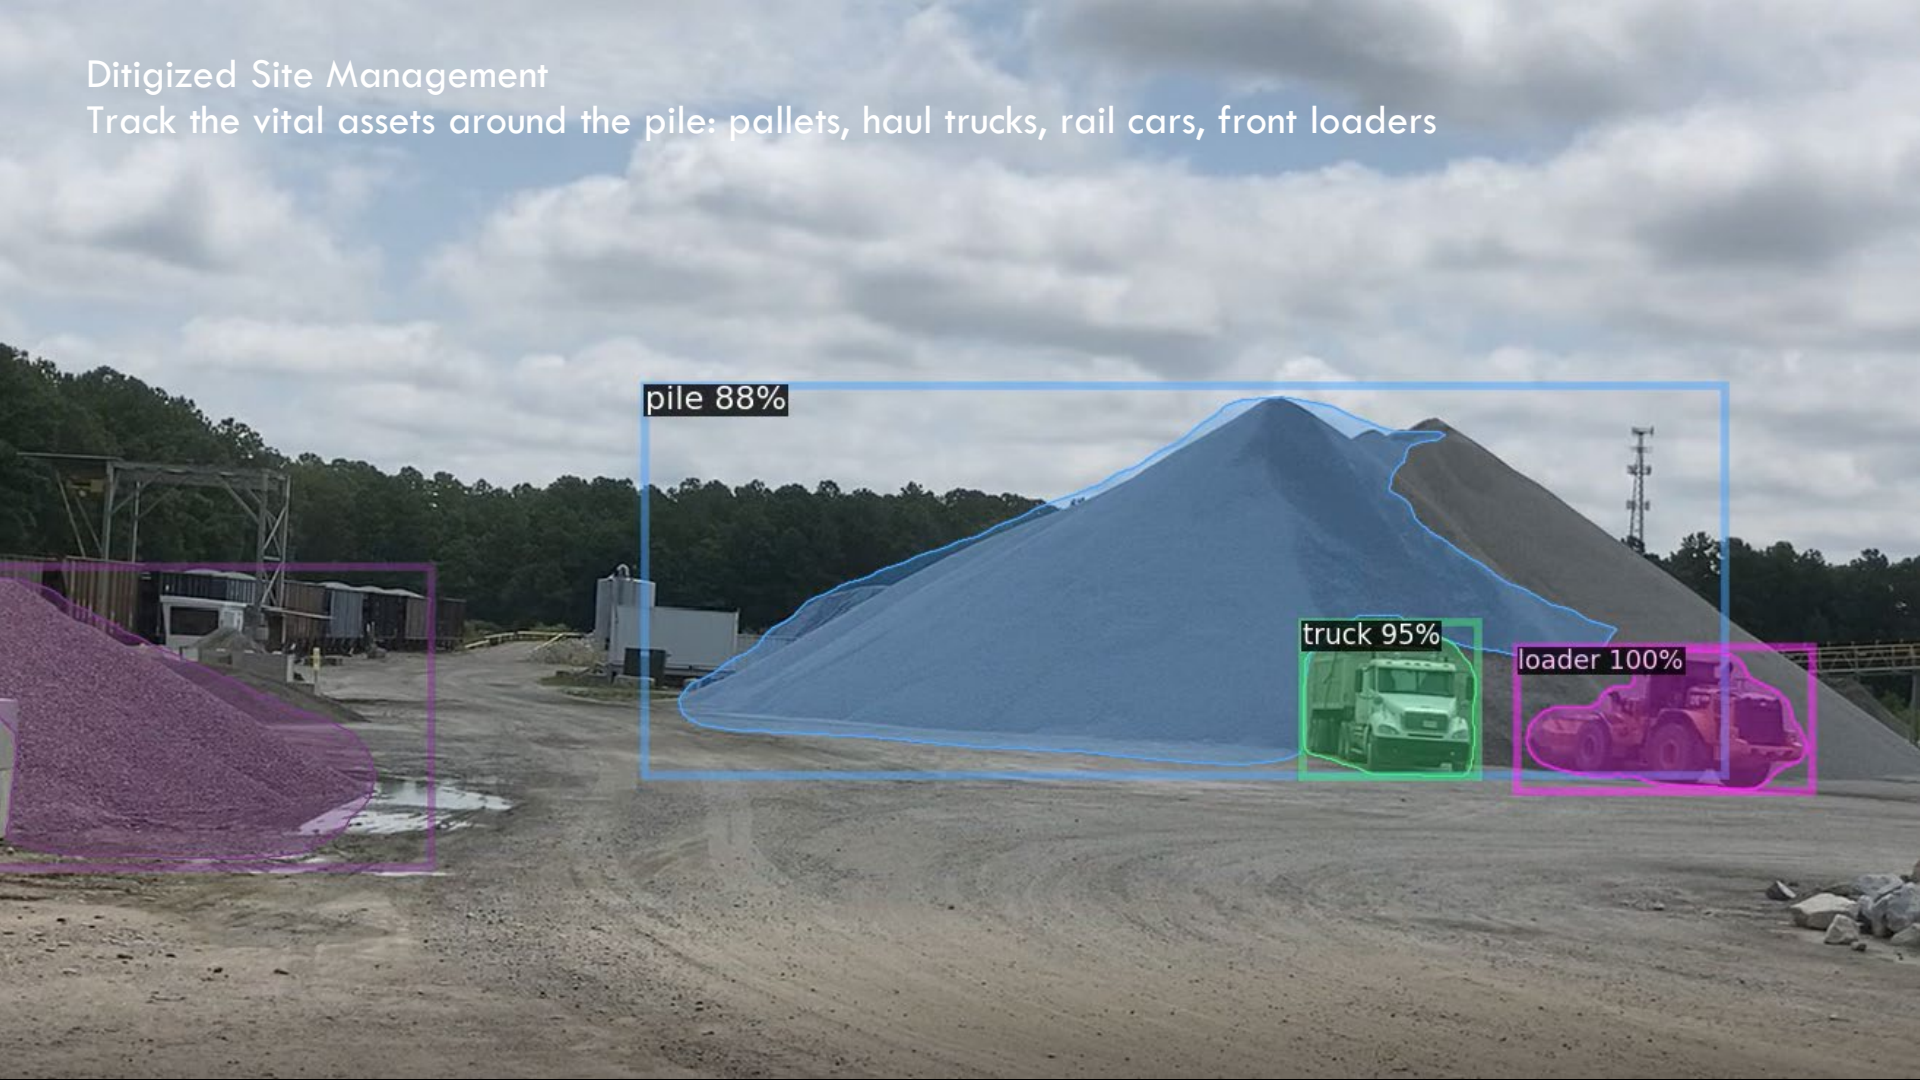

What would you like to see in real-time?

- **Inventory levels:** Reduce waste by 30%
- **Equipment condition:** Avoid work
stoppage by tracking defectgs
- **Material movements:** 5% fuel savings
- **Safety:** No reportables

Ditigized Site Management

Track the vital assets around the pile: pallets, haul trucks, rail cars, front loaders

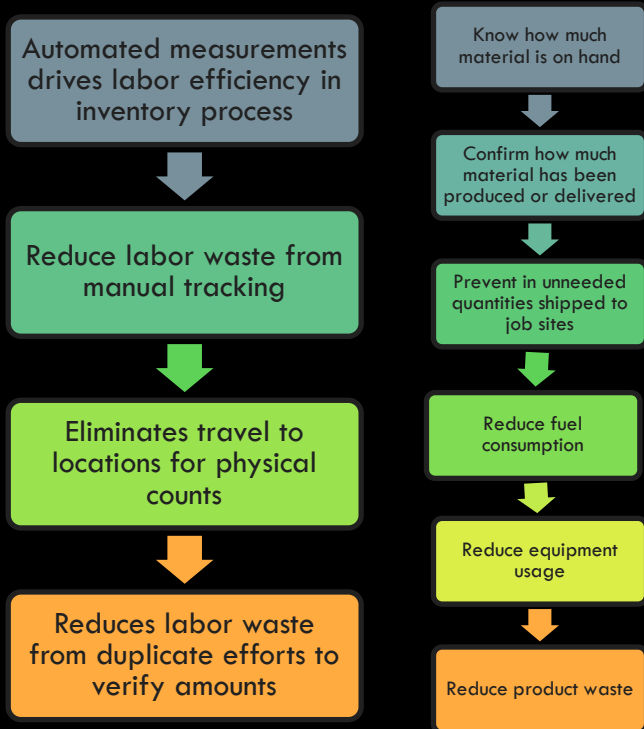

Business case for digitization is compelling:

Bad data is costing the construction industry **\$2 trillion** per year

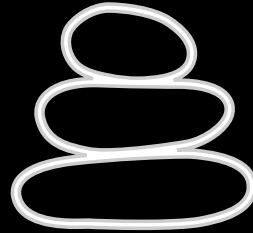

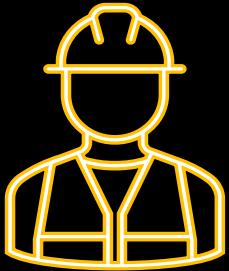

- Over **30%** of **project data** is 'bad'
- Bad data results in **poor decisions** more than **50%** of the time.
- Perpetual inventory is a problem.
Common variances **15-30%**

Digitization improve sustainability and reduce waste

Digitization sustainability and carbon footprint ROI

Reduce waste: Labor and routes

- Find 10 cents = 1% margin gain
- +10% back-office productivity
- -80% truck redirects

Safety: Risk management with men and women off the pile

Expand sales growth matching production to demand

- Reduce friction
- Use idle capacity = 1M tons per site

Reduce excess inventory

- Optimize DOH 10% = free 5% working capital

Journey from no digitization to AUTOMATION and then integrated industrial cloud:
Construction industry will have all segments of the supply chain connected

NASCENT

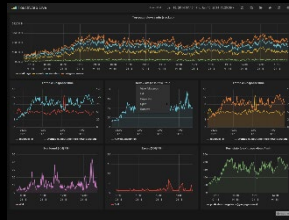

Limited visibility, not real-time

Descriptive, Excel based insights

Limited automation or collaboration

EMERGING

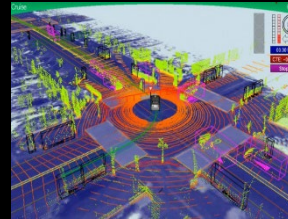

Real-time, end-to-end Supply Chain visibility

Predictive analytics, prescriptive guidance

Manual actions such as exception handling

AUTONOMOUS

Automated decision making

Automated workflows within company, e.g. smart robotics

All IT applications in cloud

INTEGRATED

Automated workflows across companies

Ecosystem open to all supply chain partners

Industrial cloud

Mobile computing

SR Measure: Use the iPhone to measure stockpiles on-the-spot

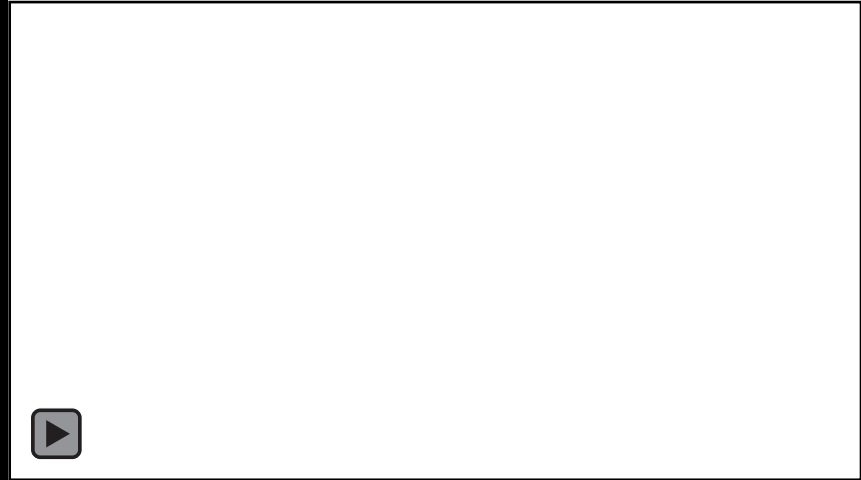

Advanced computer vision algorithms
reconstruct the pile using images

How it works:

3 sensors on iPhone

(an accelerometer, a gyroscope, and
a magnetometer)

eliminate need for cones or ground control
or manual measurements

Example iOS use case: Recon3D: 1,000s of first responders, crime scene investigators, and forensics professionals document 100s of scenes daily with an iPhone

Example iOS use case: 100s of field workers document telecom assets, rooftops and towers with iPads rather than VLK laser scanners used to scan telecom assets, rooftops and towers

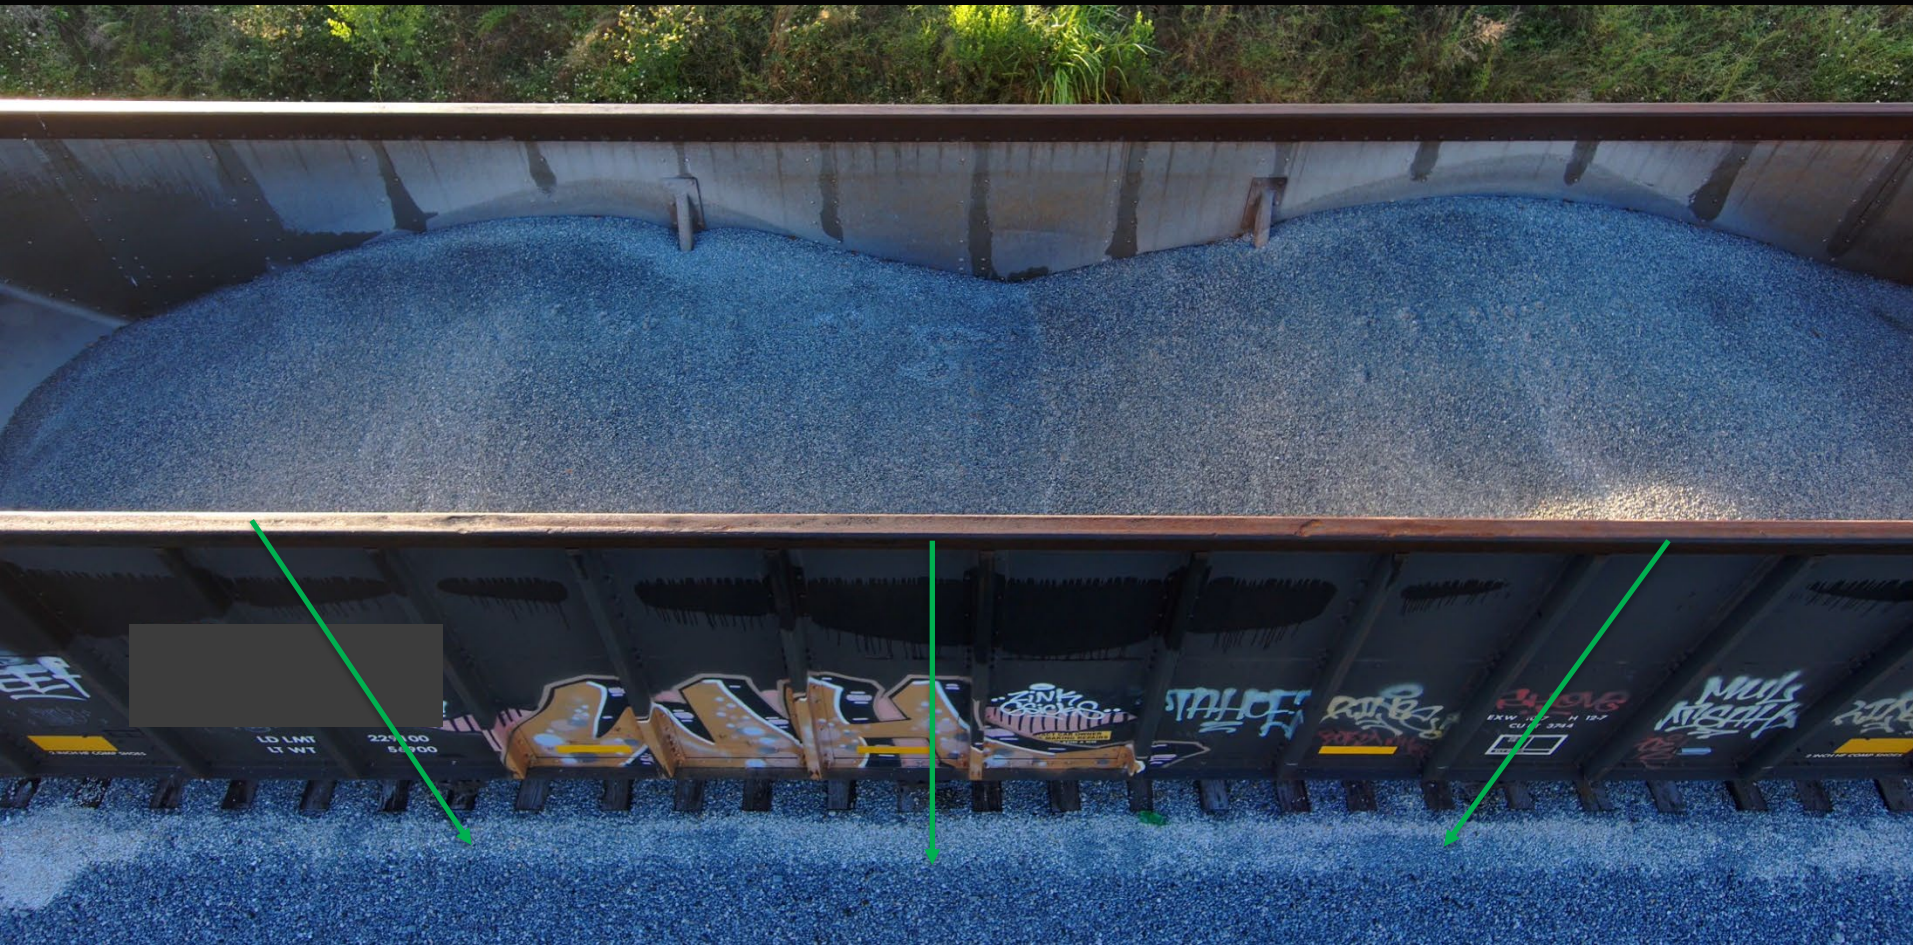

Point cloud reconstruction of rail cars

Use imagery for rail car analysis:
volume, leakage, car condition

Example Rail Car #1

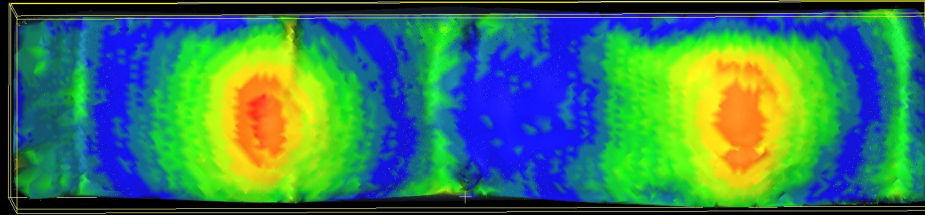

Example Rail Car #1: Heat map profile shows material shift, but no leakage

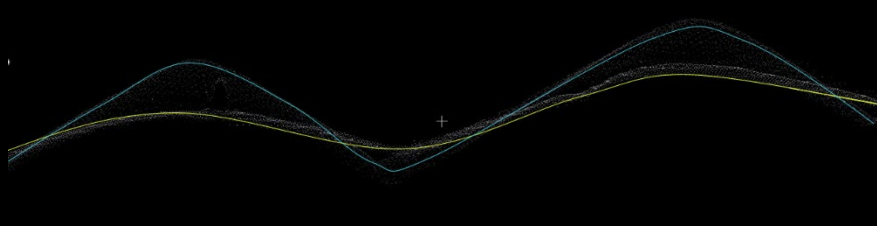

Outbound

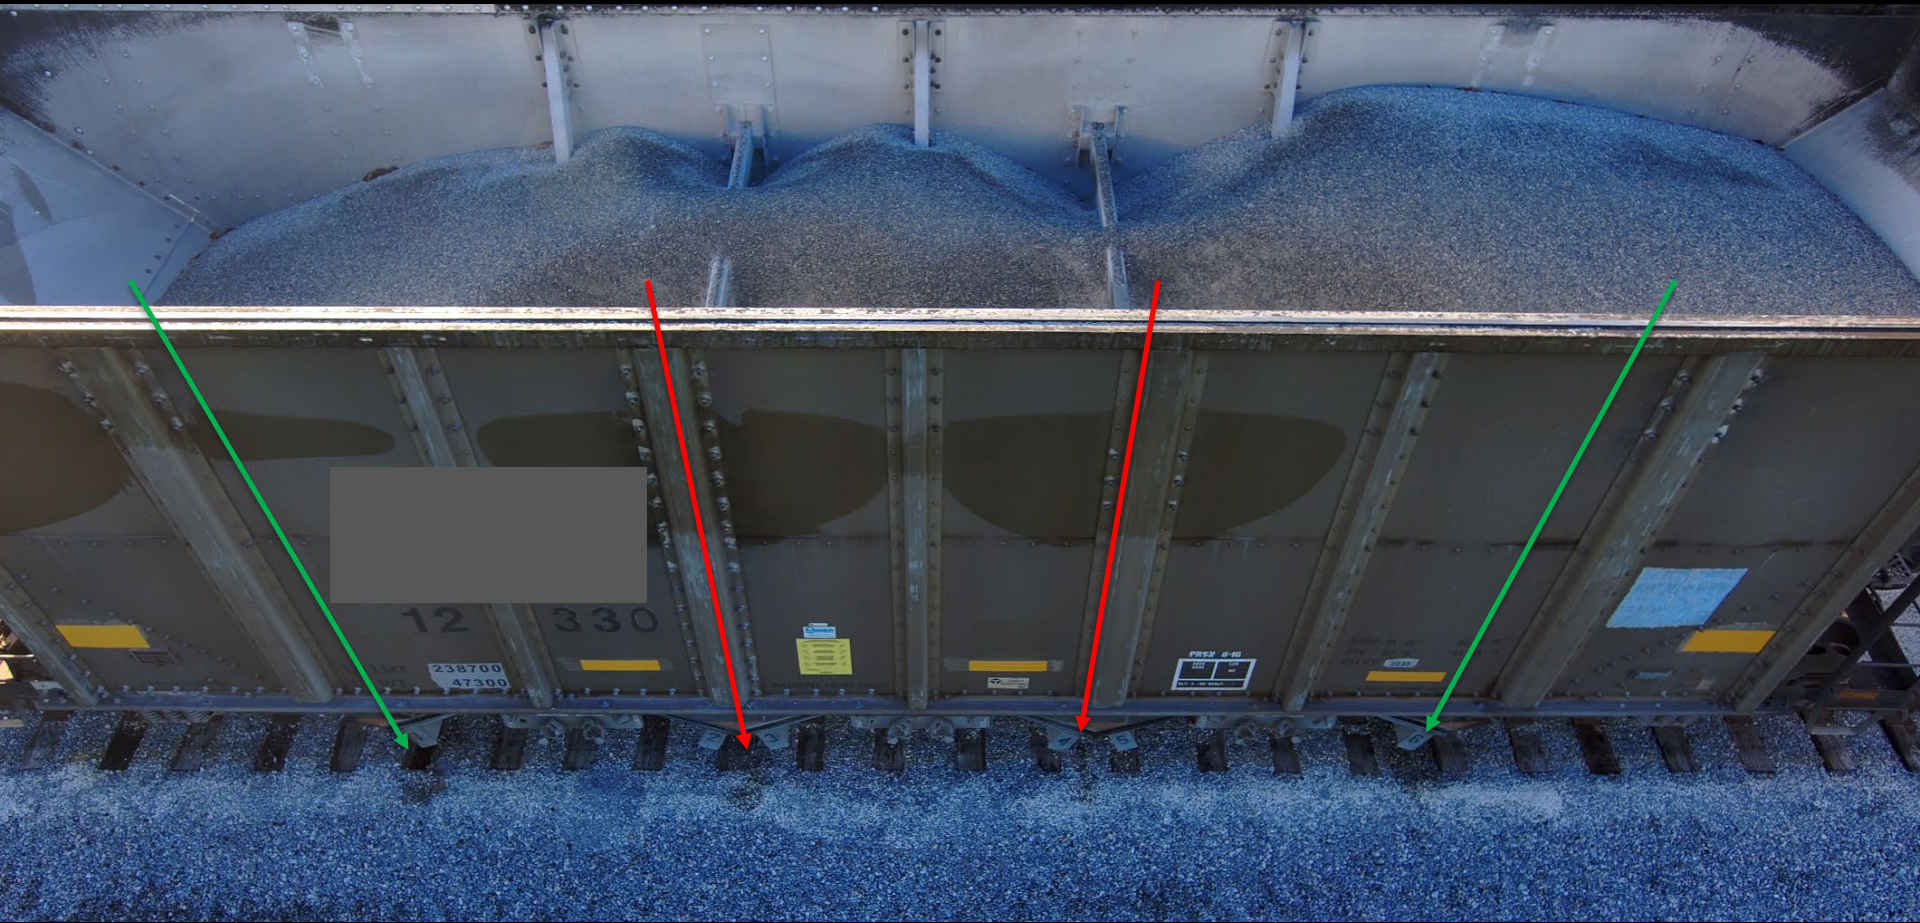

Inbound

Profile

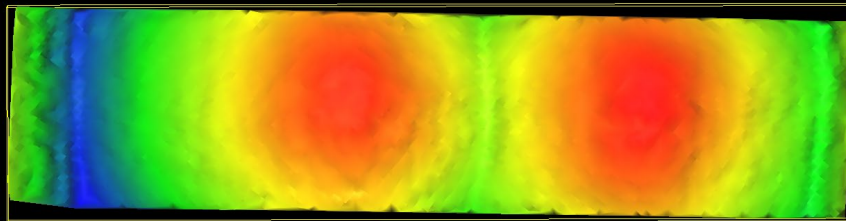

Example Rail Car #2

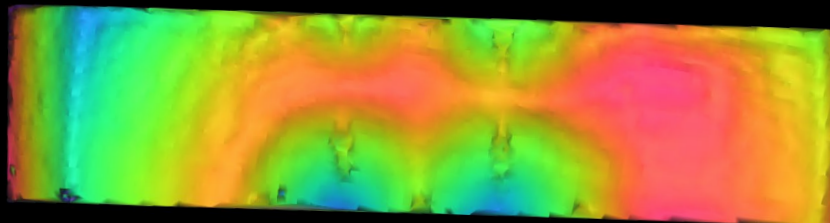

Example Rail Car #2: Heat map shows leakage due to door failure

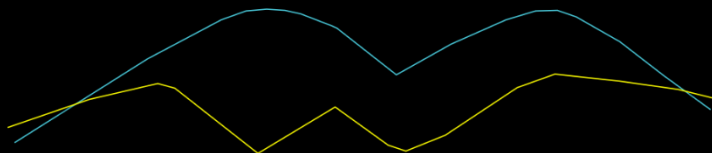

Outbound

Inbound

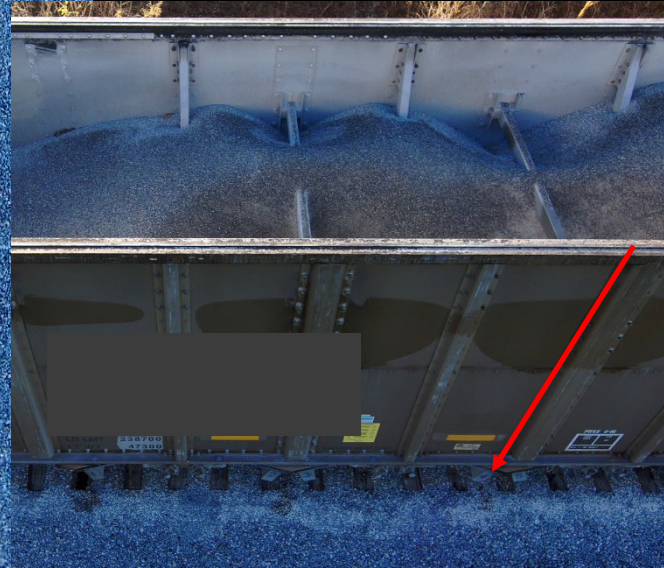

Profile

Example Rail Car #2

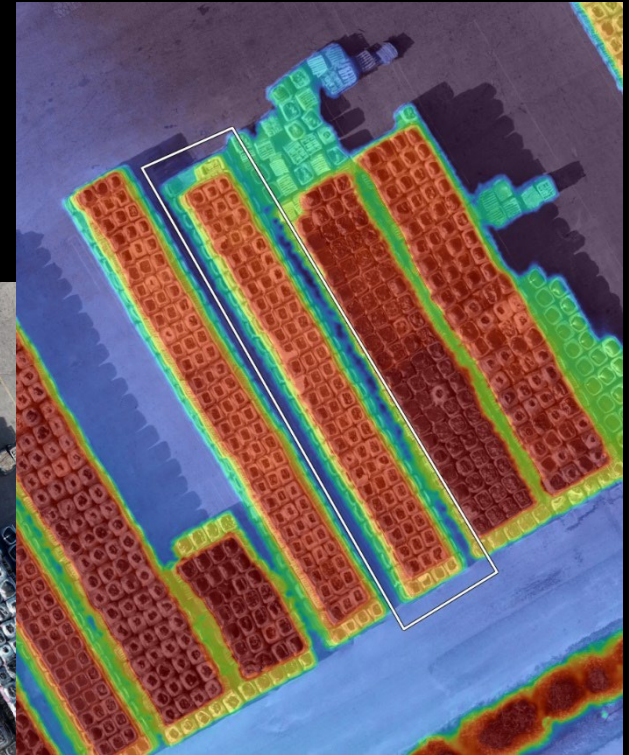

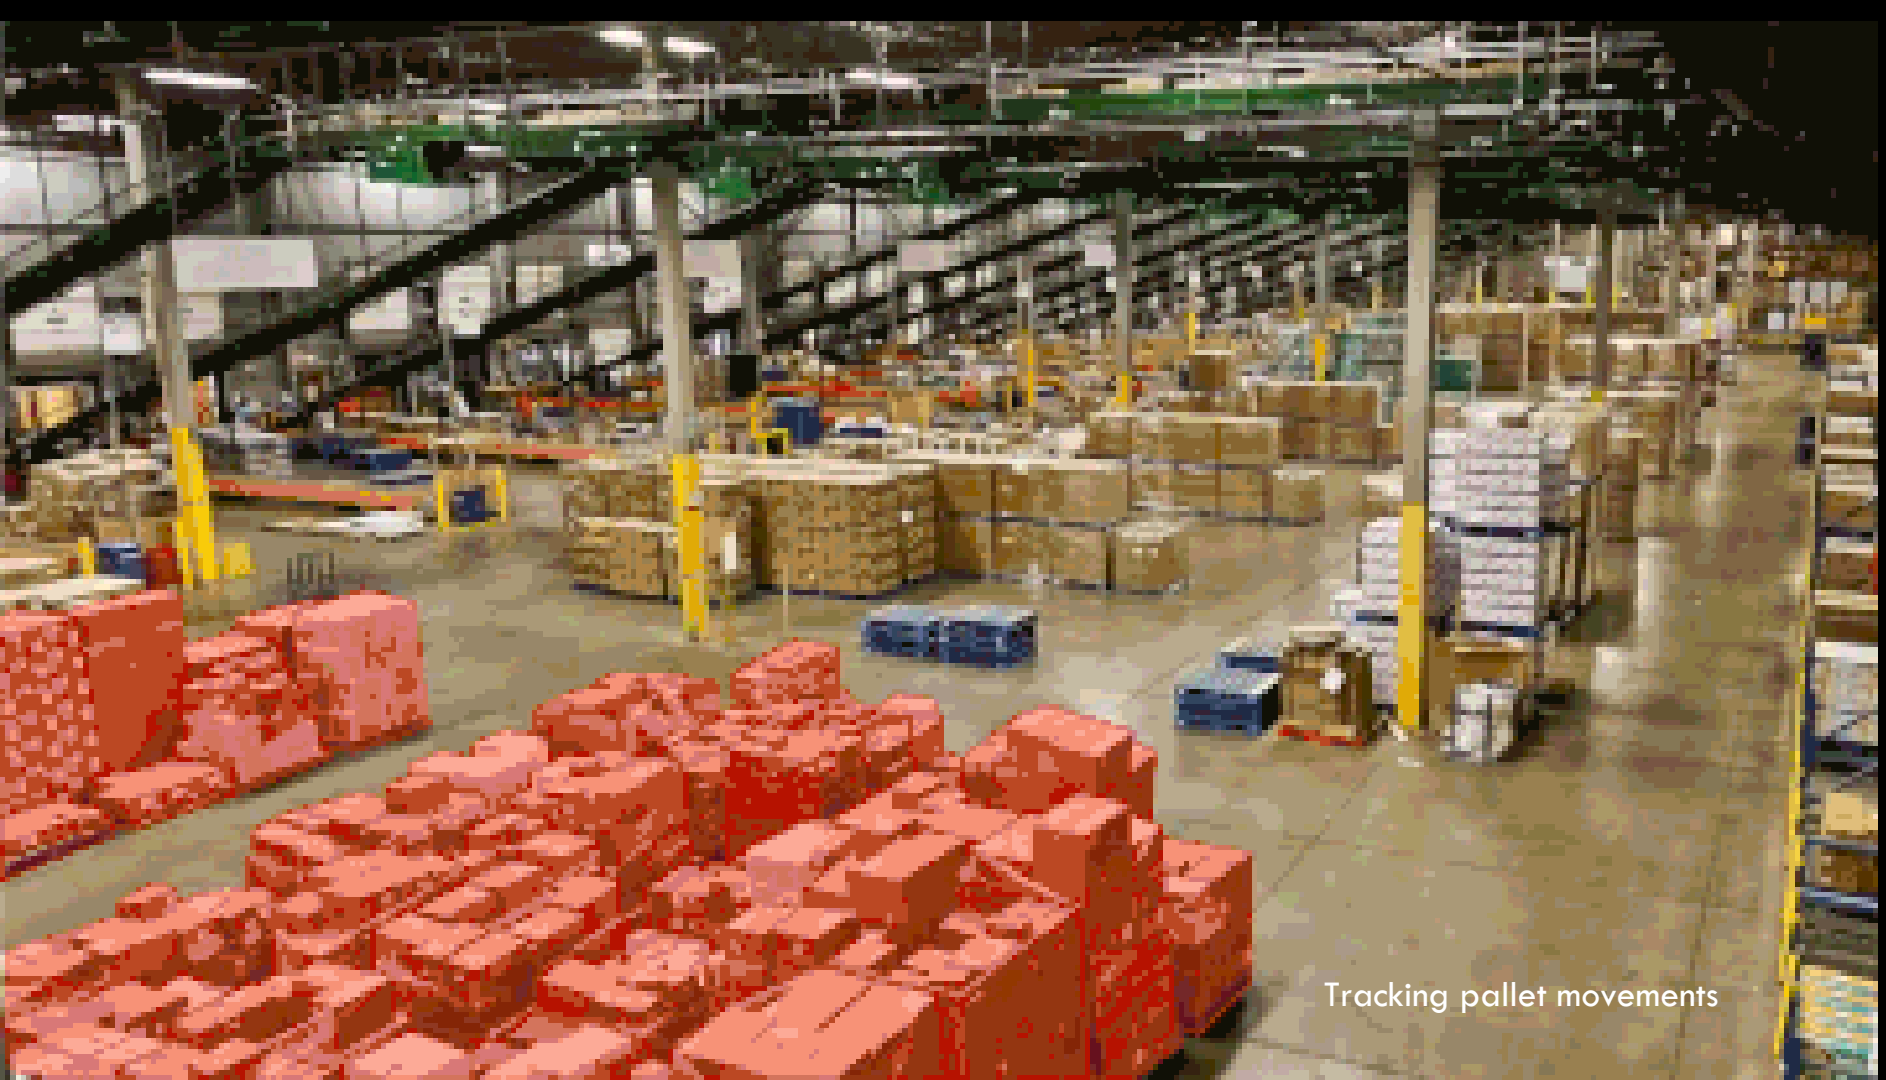

Irregularities in material surface
indicate leakage

Digitized Pallet Counts

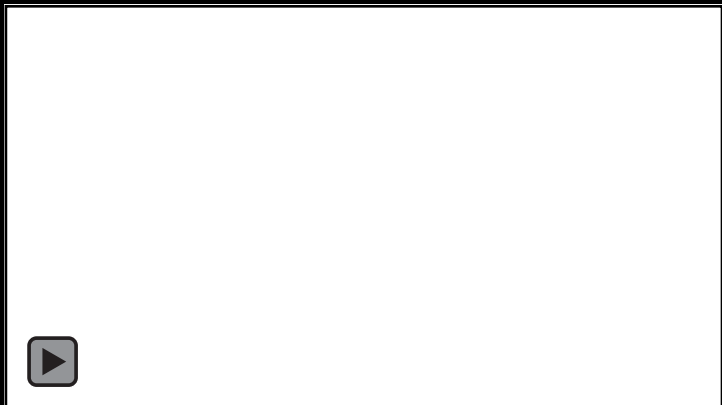

- Eliminated need for manual pallet count
- Massive business ROI:
- Reduce undetected inventory losses
- Eliminate production stoppages
- Labor savings: thousands of hours
- Safety

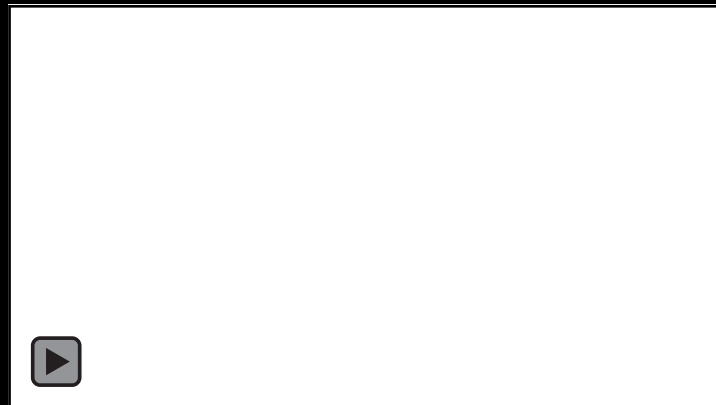

Tracking pallet movements

Autonomous drone

Cable cam

Front loader

Rolling robot: continuous monitoring of pile activity

What if you could step into a site through an image?
Instant NeRFs: The next big thing?

NeRF = Neural Radiance Field

3D scenes are created
from 2D images

spatial location and
volumetric rendering

Realistic environments
